PROGRAM 1

WORKING WITH GOOGLE DRIVE TO MAKE SPREADSHEET AND NOTES

AIM:

To create a Spreadsheet using Google drive and to make a notes in spreadsheet

ALGORITHM:

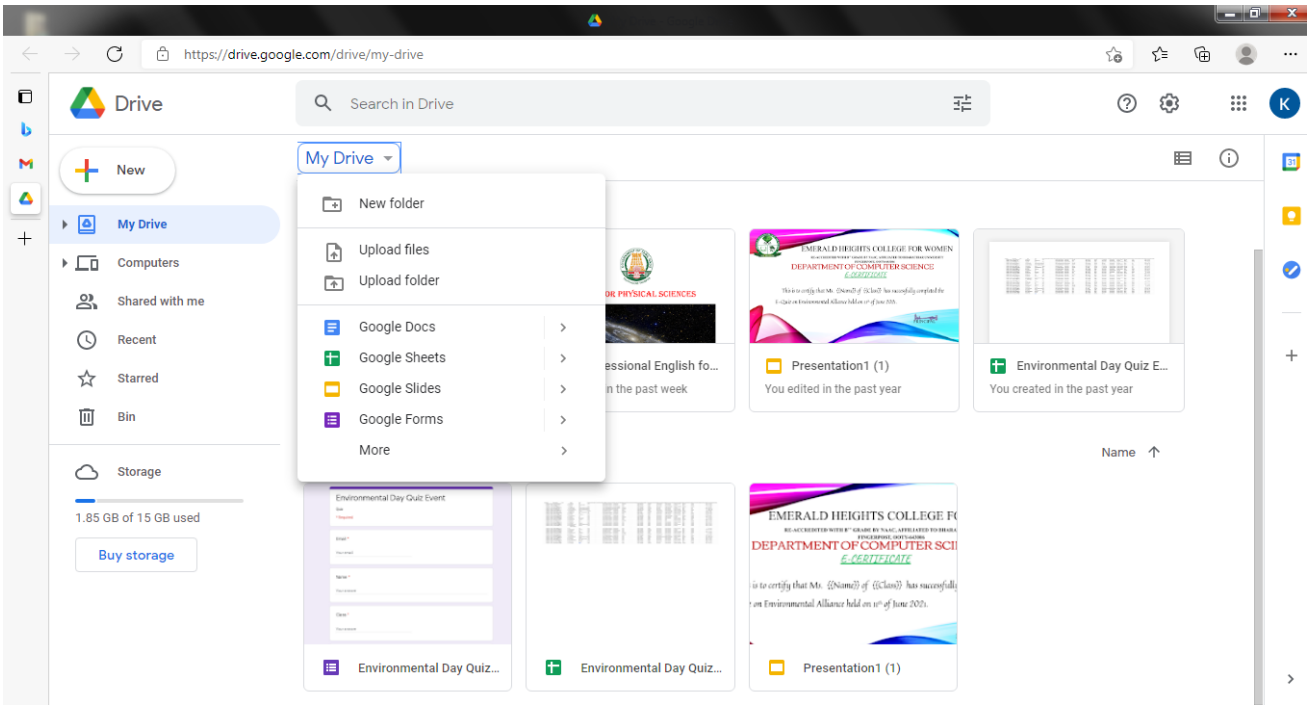

STEP 1: Start the program

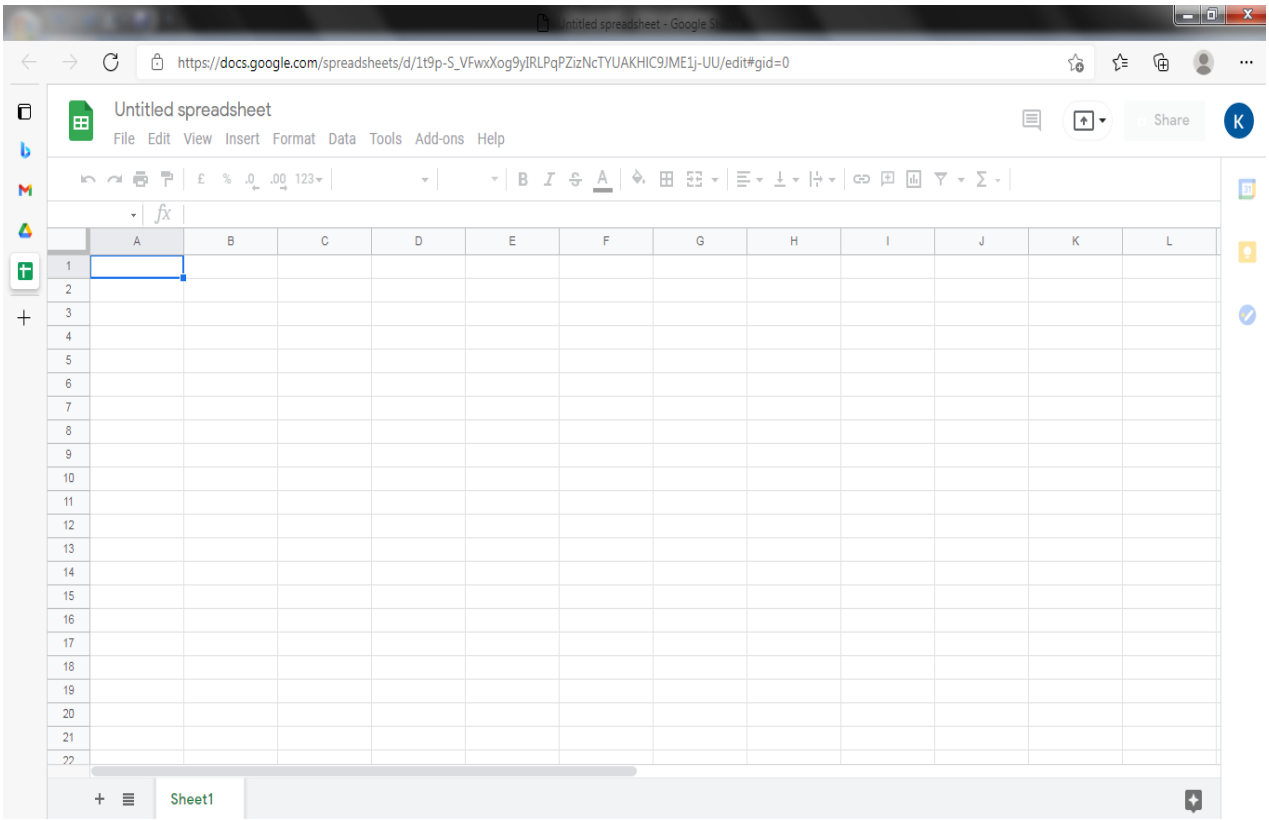

STEP 2: Sign in your mail id and open a drive for working in a spreadsheet

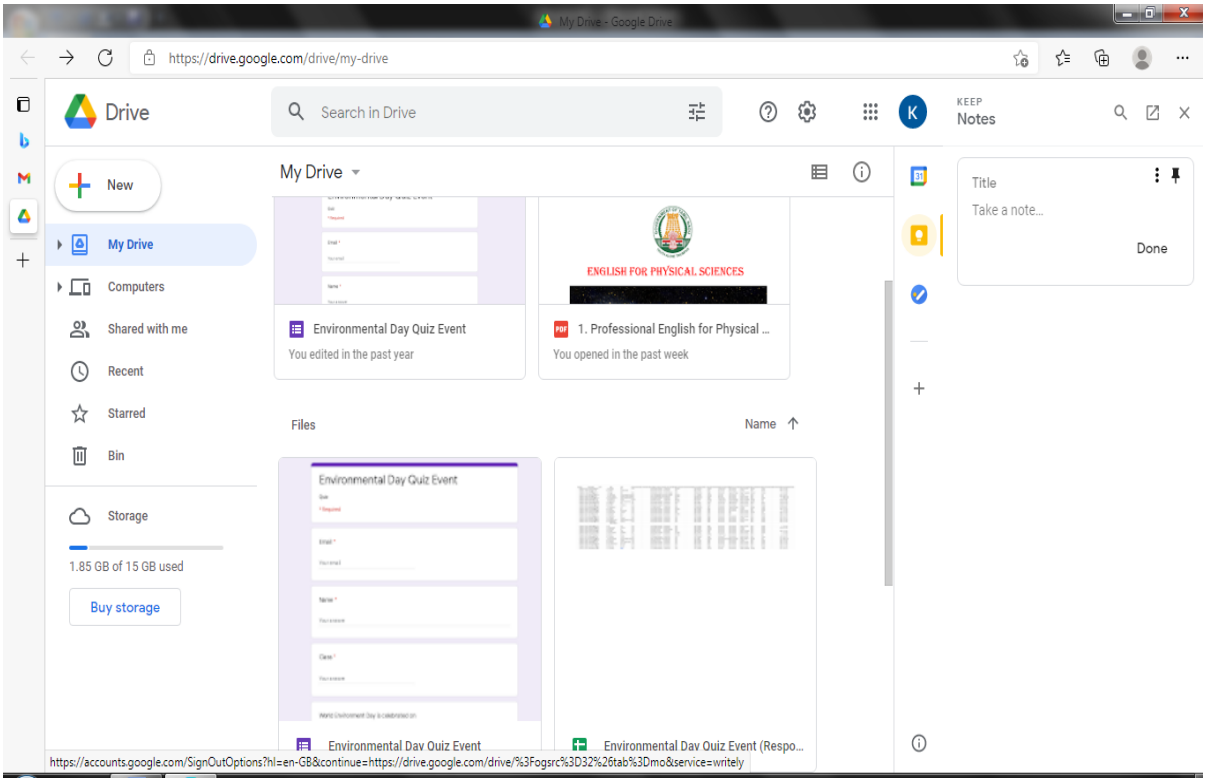

STEP 3: Open a my drive and select a Google sheets (spreadsheet).

STEP 4: Make a note & comments in the selected spreadsheet(cells)

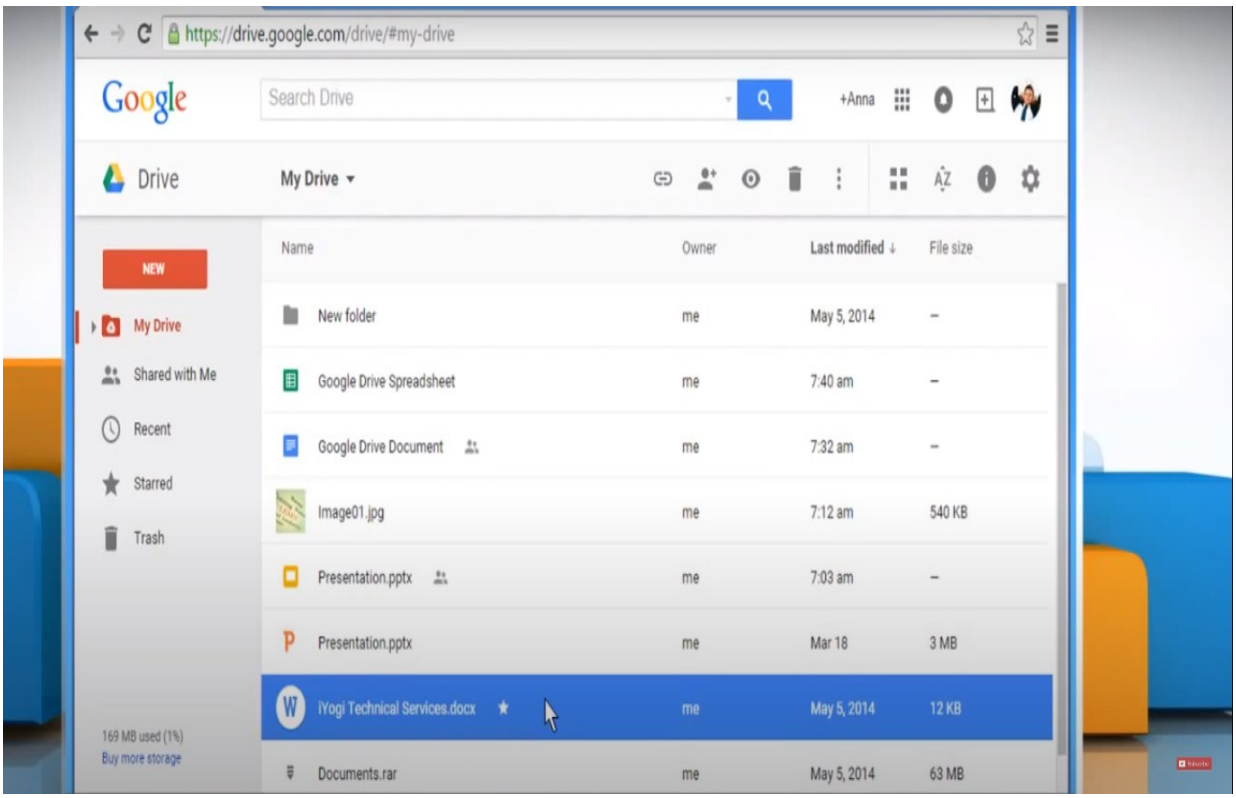

STEP 5: Stop the program

VirtualBox binaries
By downloading, you agree to the terms and conditions of the respective license.
If you're looking for the latest VirtualBox 6.0 packages, see VirtualBox 6.0 builds. Please also use version 6.0 if you need to run VMs with software virtualization, as this has been discontinued in 6.1. Version 6.0 will remain supported until July 2020.
If you're looking for the latest VirtualBox 5.2 packages, see VirtualBox 5.2 builds. Please also use version 5.2 if you still need support for 32-bit hosts, as this has been discontinued in 6.0. Version 5.2 will remain supported until July 2020.
VirtualBox 6.1.10 platform packages
Windows hosts
OS X hosts
Linux distributions
Solaris hosts
The binaries are released under the terms of the GPL version 2.
See the changelog for what has changed.
You might want to compare the checksums to verify the integrity of downloaded packages. The SHA256 checksums should be favored as the MD5 algorithm must be treated as insecure!
SHA256 checksums, MD5 checksums

PROGRAM 3

TO HOST A STATIC WEBSITE

AIM:

To create a static website on cloud

ALOGRITHM:

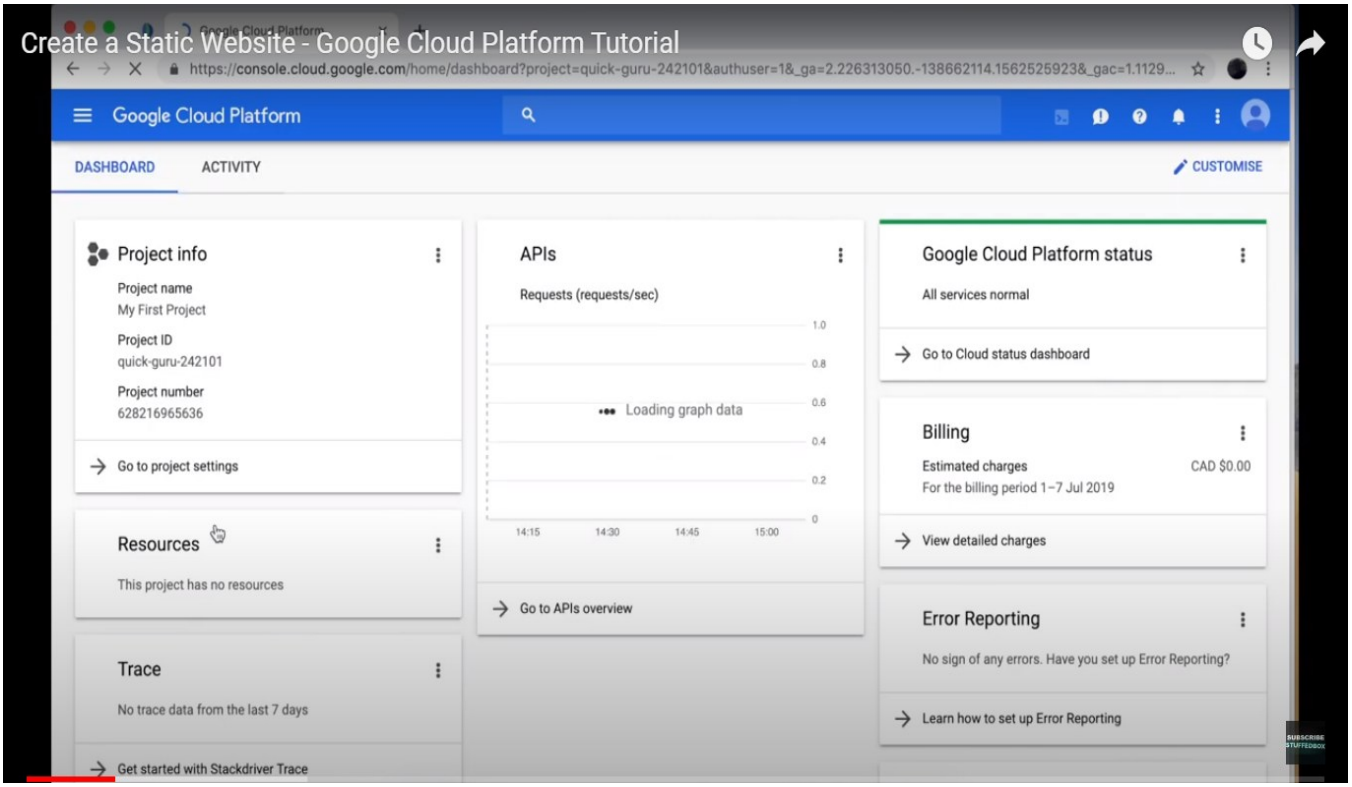

STEP 1: Start the process

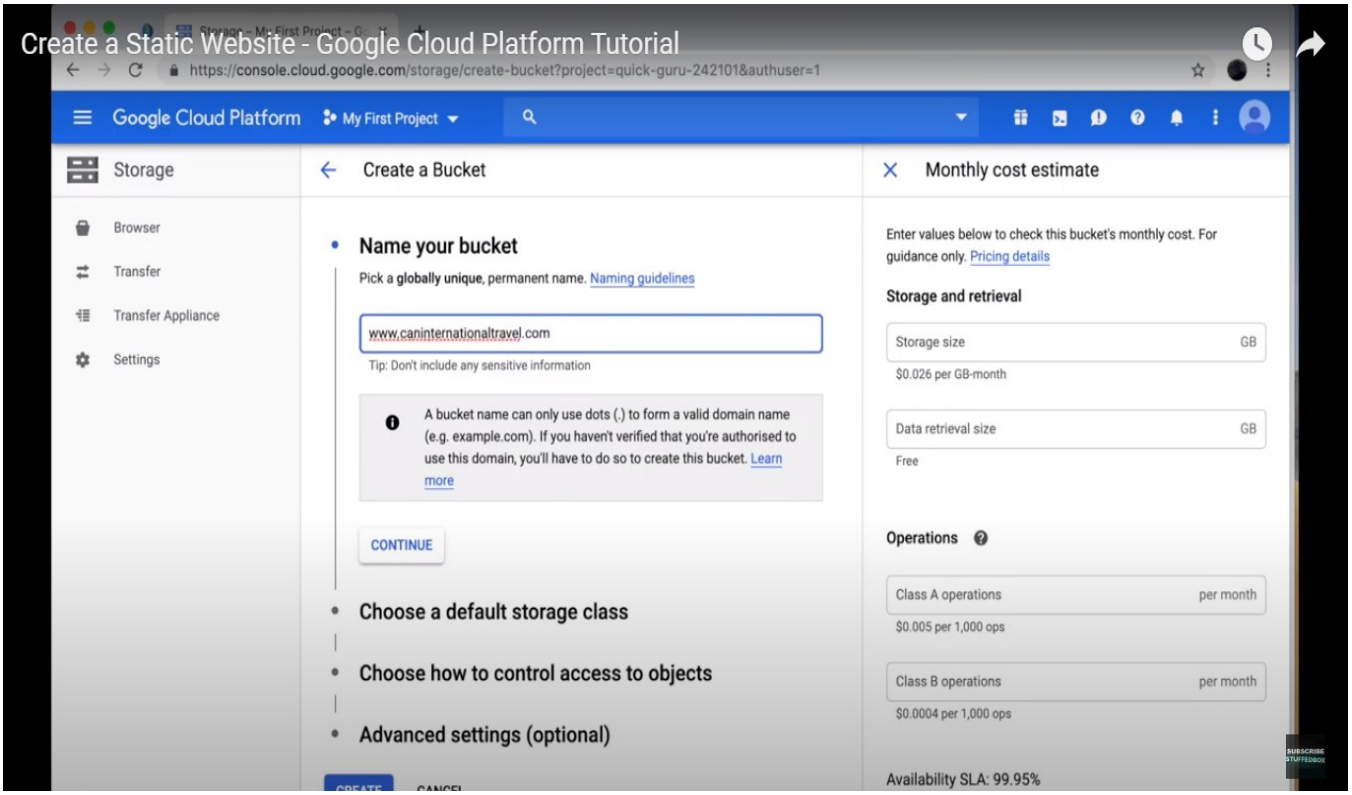

STEP 2: Open the Google cloud platform for creating a static website

STEP 3: Create a bucket and set the name of your bucket and give the details of the static website

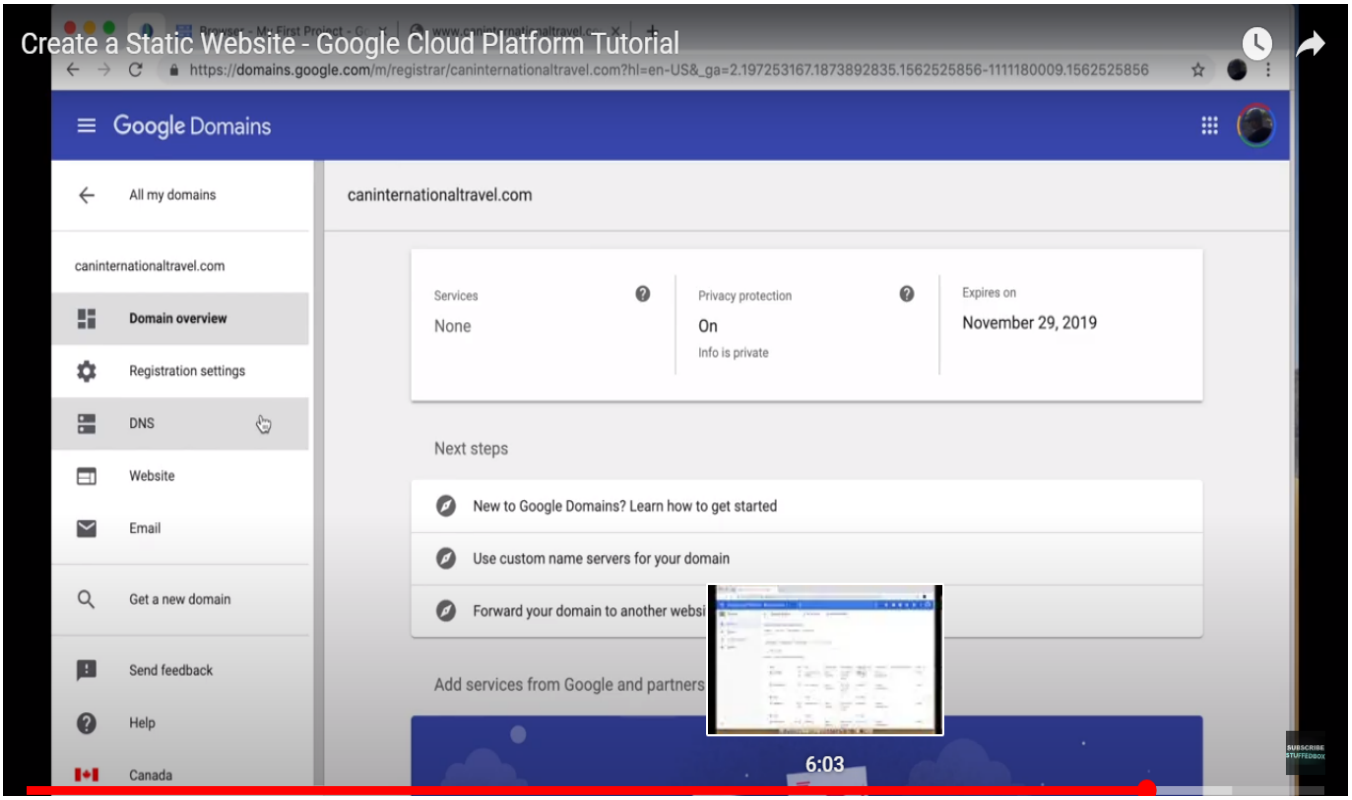

STEP 4: Give a domain name for the website and make changes in setting and finally display the static details of the named website

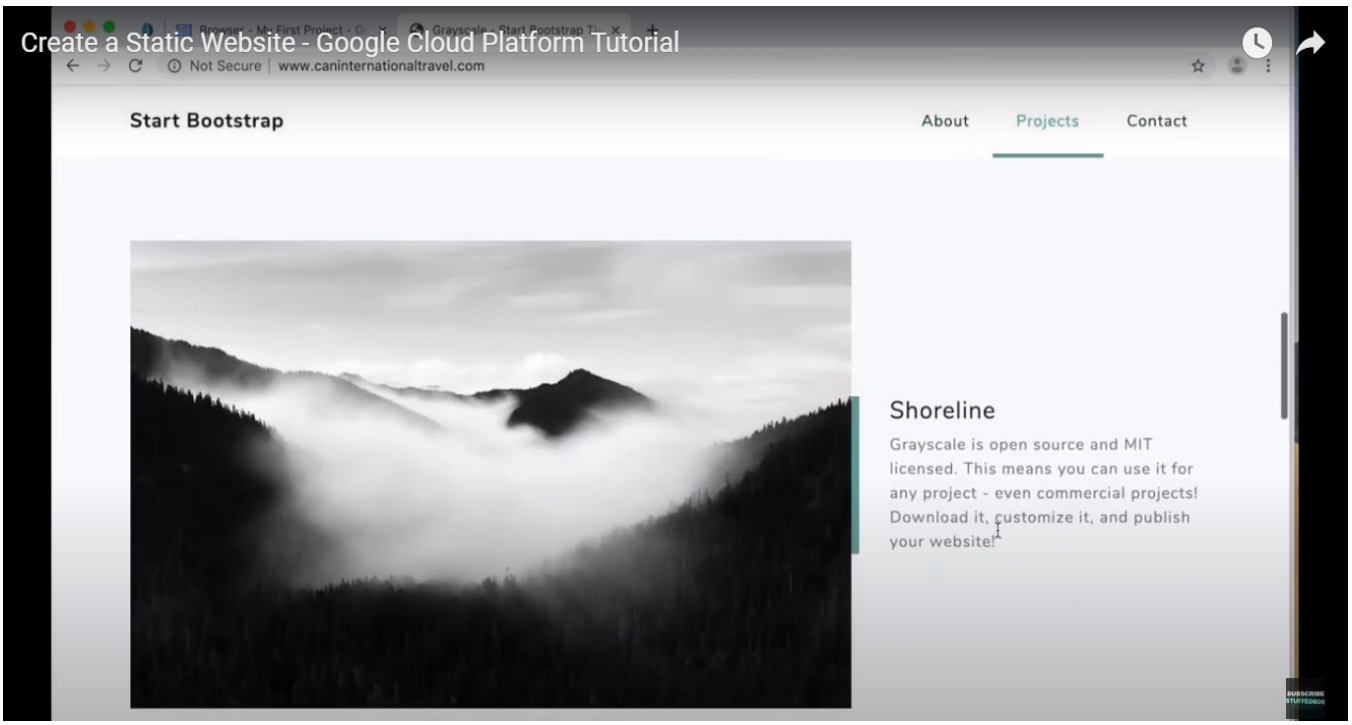

STEP 5: Stop the program

PROGRAM 4
EXPLORING GOOGLE CLOUD

AIM:

To create and exploring Google cloud for the a)Storage b) Sharing of data c)Manage your calendar , to- do list d)Document editing tool

ALOGRITHM:

STEP 1: Start the process

STEP 2: Open a website console.cloud.google.com for using the Google cloud platform

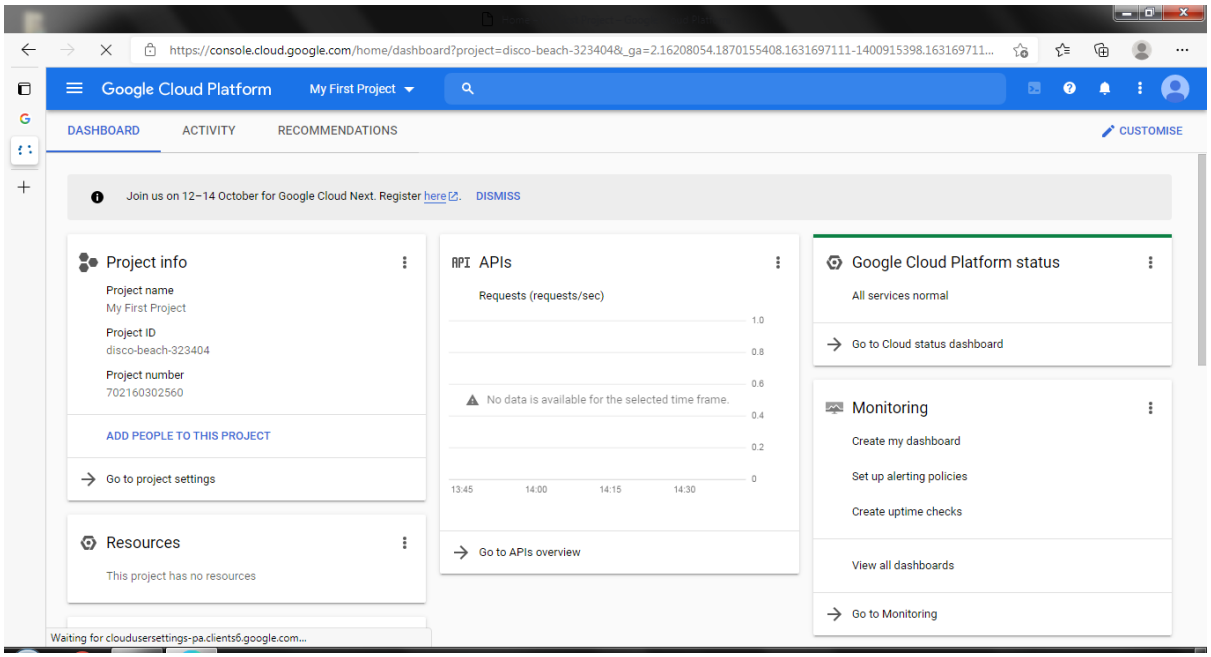

STEP 3: Click the dash board for opening the menu storage. If we open the menu it displays the storage of file in the drive

STEP 4: If we want to share the files means select a sharing of data menu from dash board and share the file

STEP 5: If we want to use the calendar for displaying the files accessing details in the right side of the form

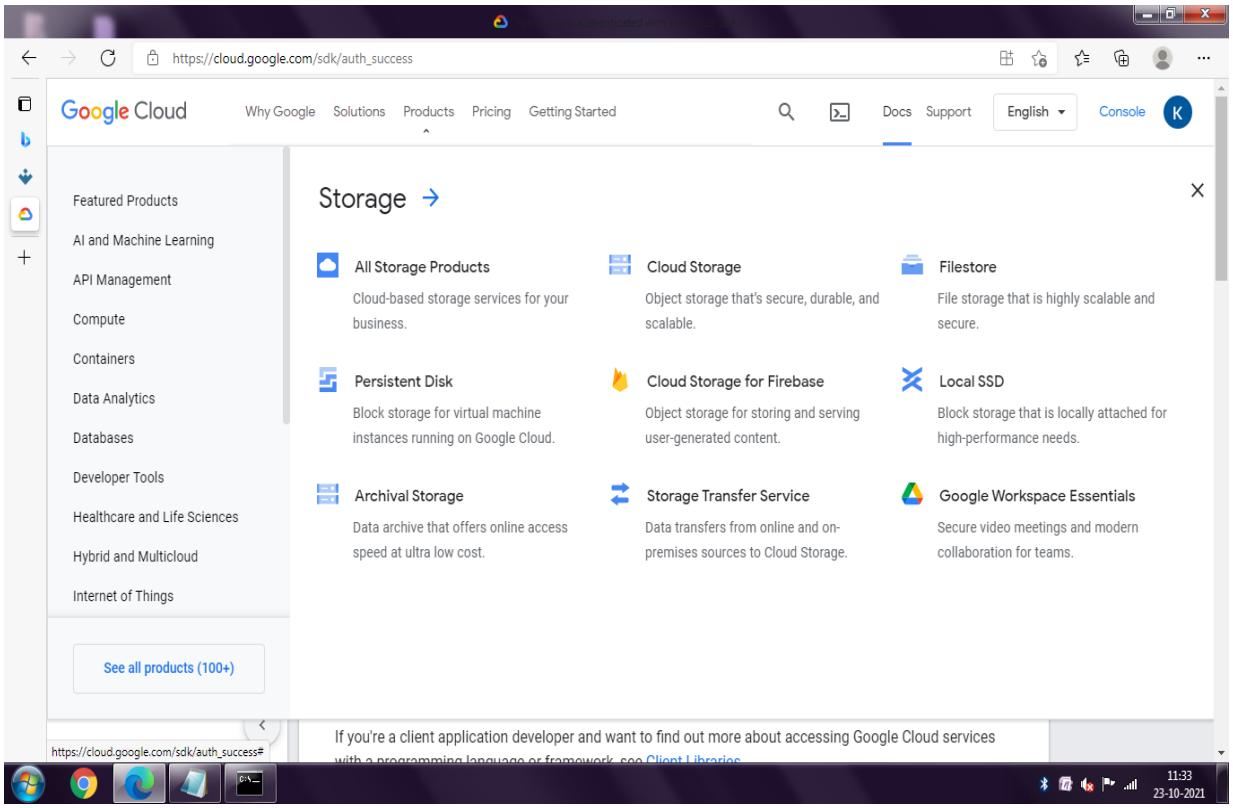

STEP 6: Click the to-do list and document editing tool for edit the document

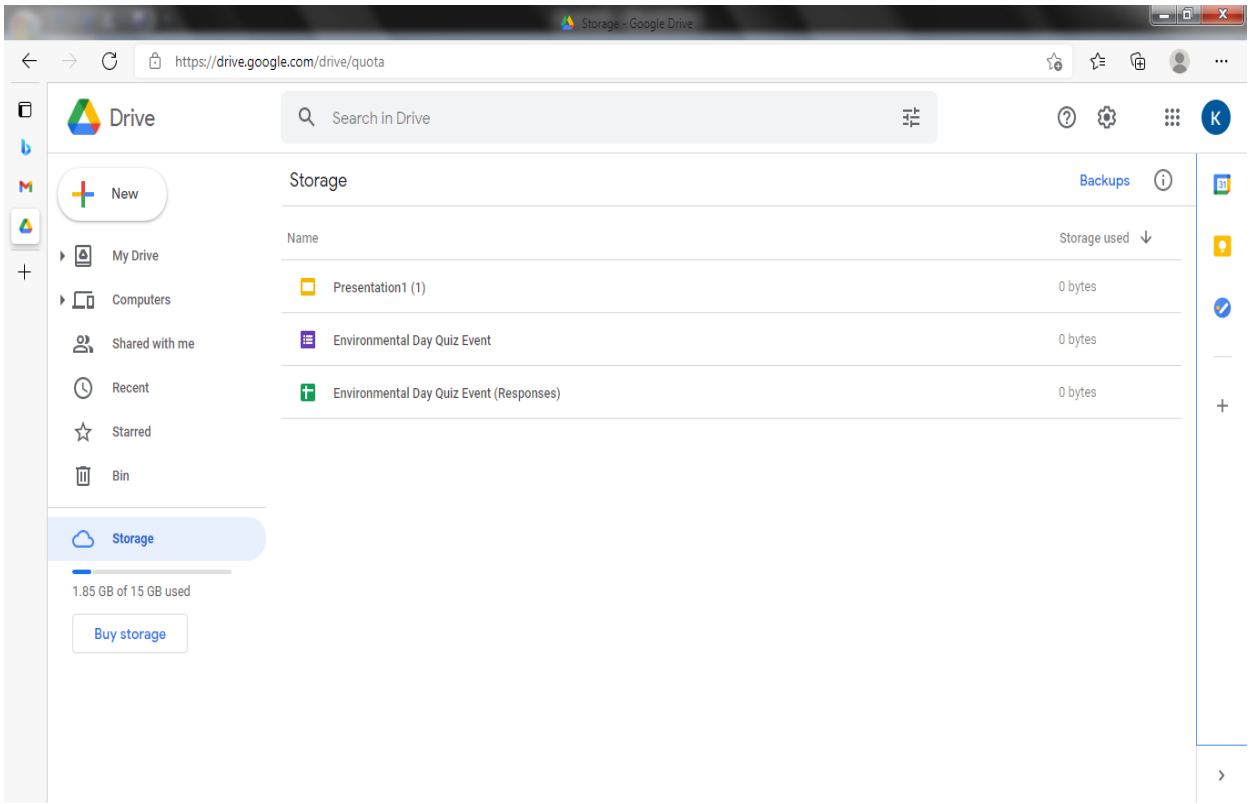

STEP 7: Stop the process

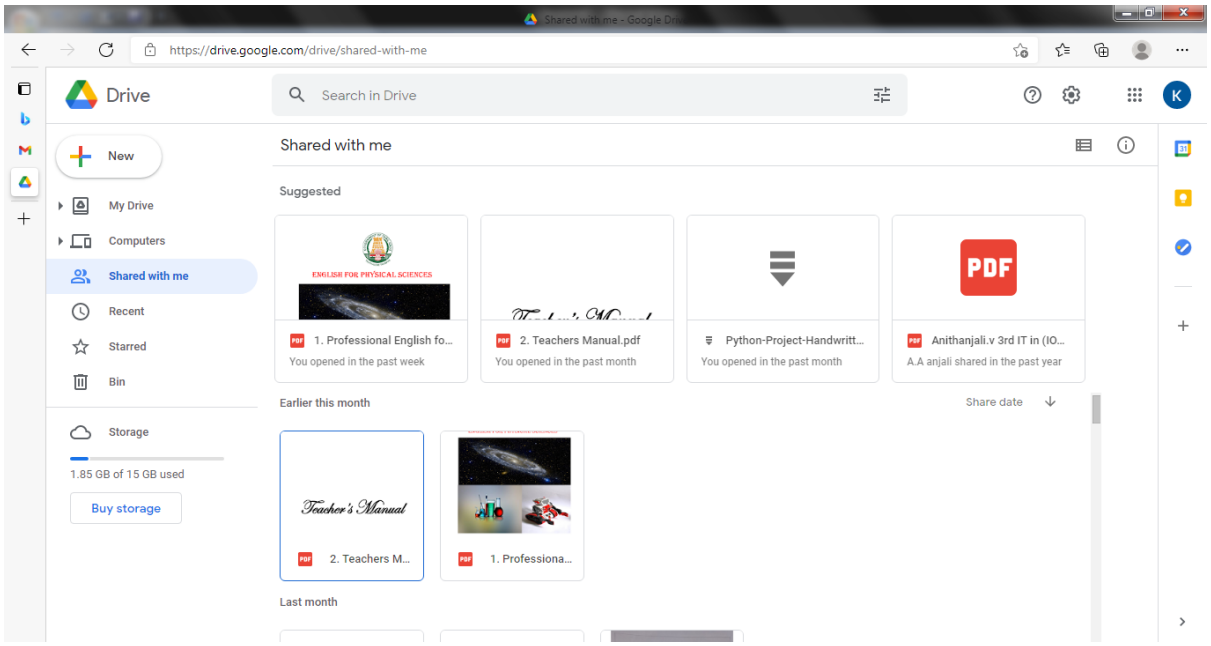

OUTPUT

Storage:

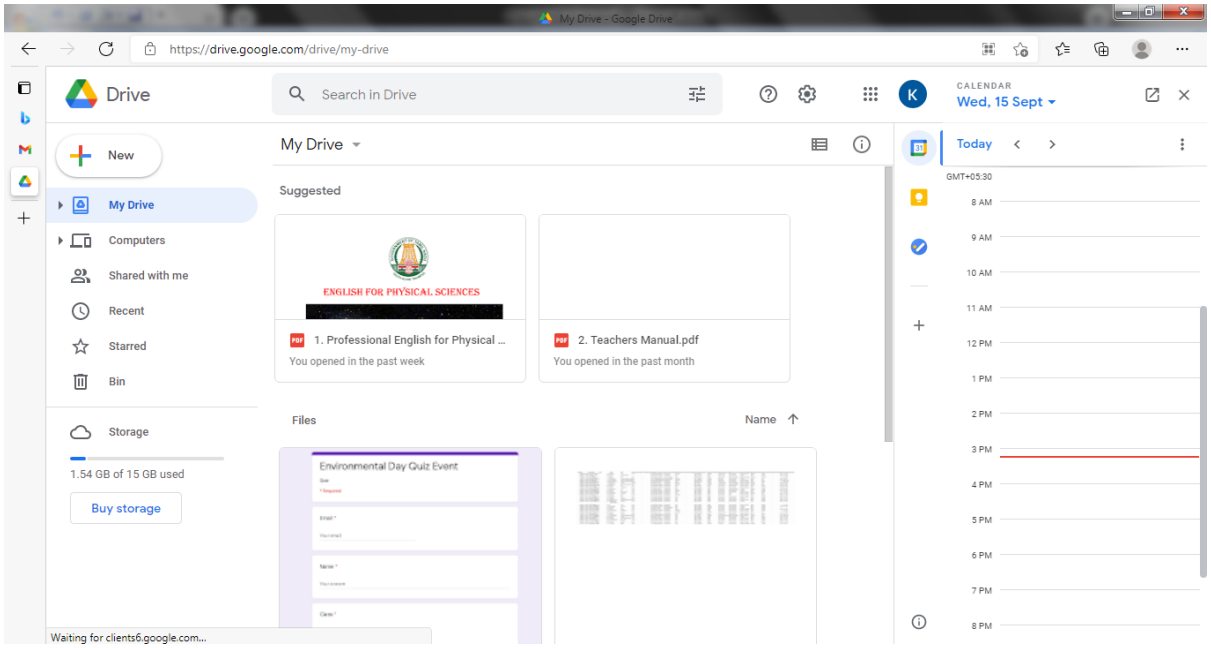

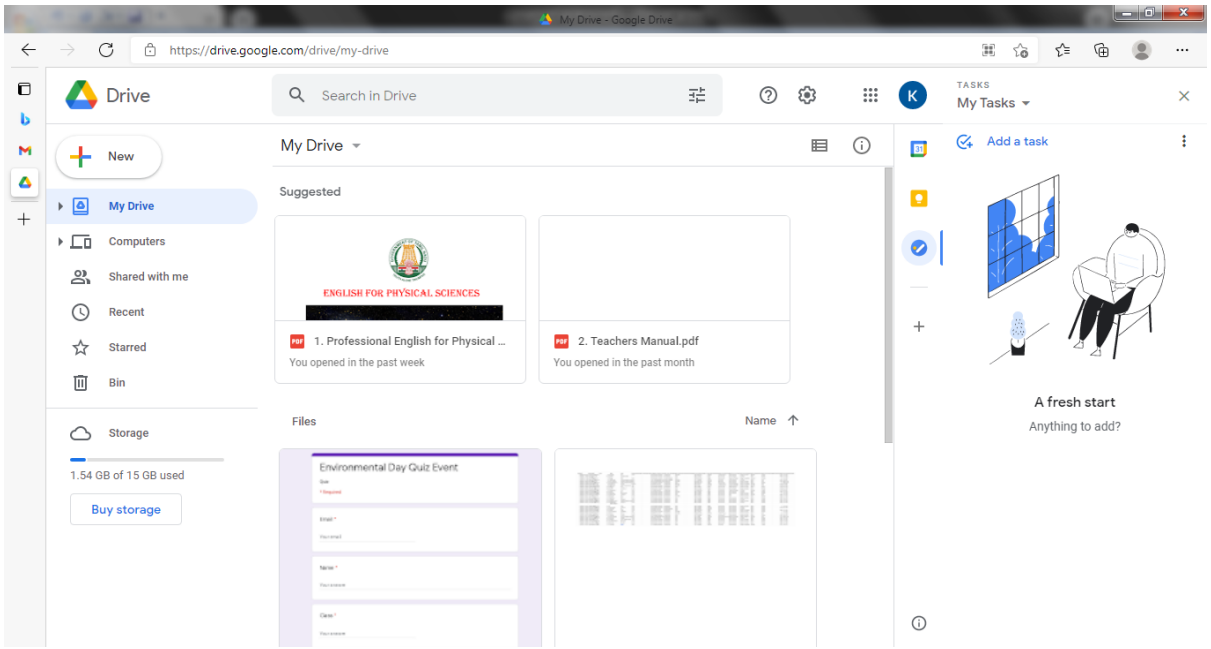

Sharing of data:

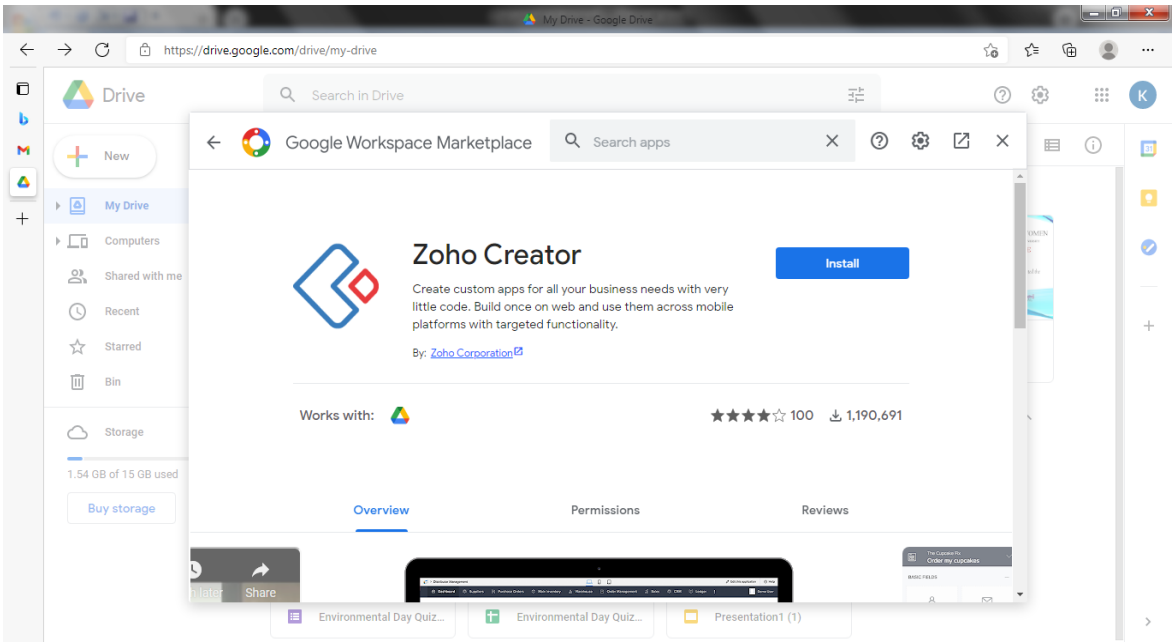

Calendar:

To do list

PROGRAM 8

TO CREATE AND QUERY A NOSQL TABLE

AIM:

To create a query a NOSQL table

ALOGRITHM:

STEP 1: Start the program

STEP 2: Open a website console.cloud.google.com for using the Google cloud platform

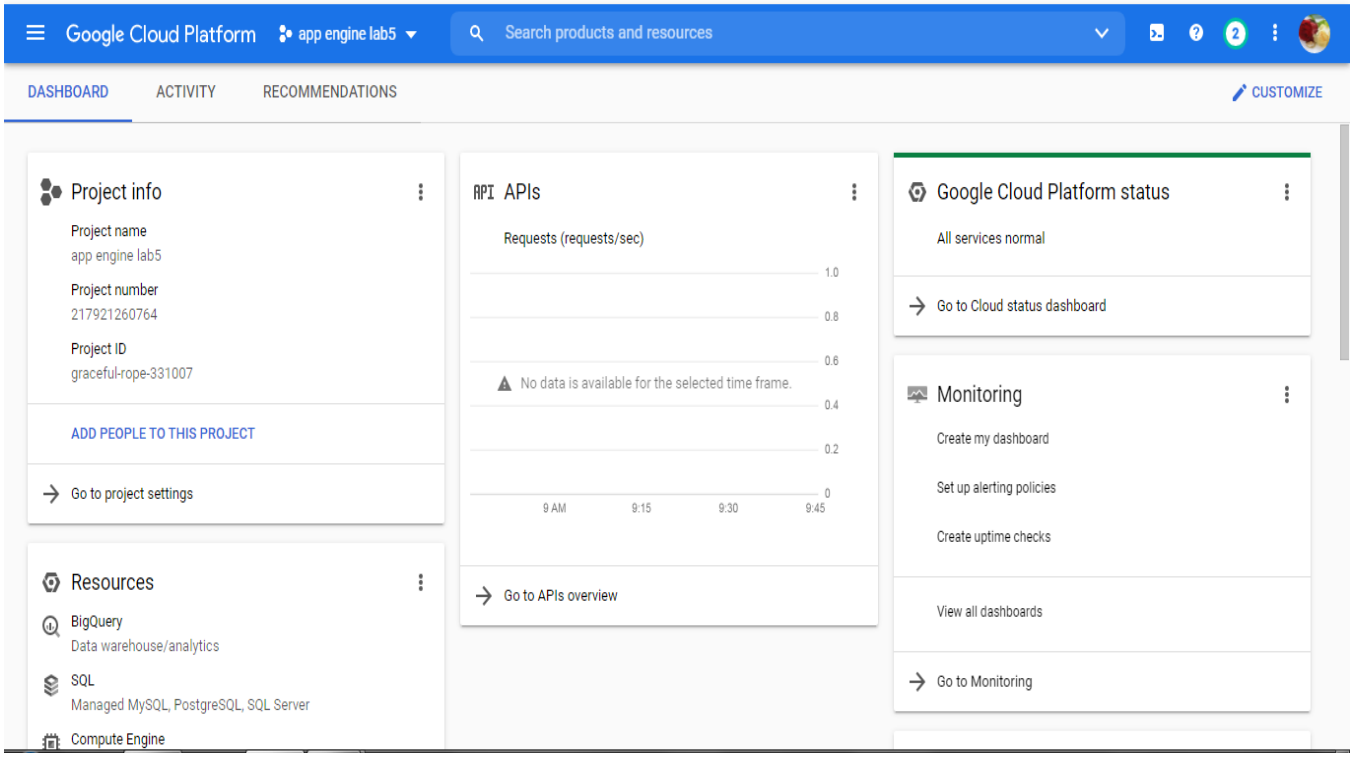

STEP 3: Click the dash board for opening the big table menu

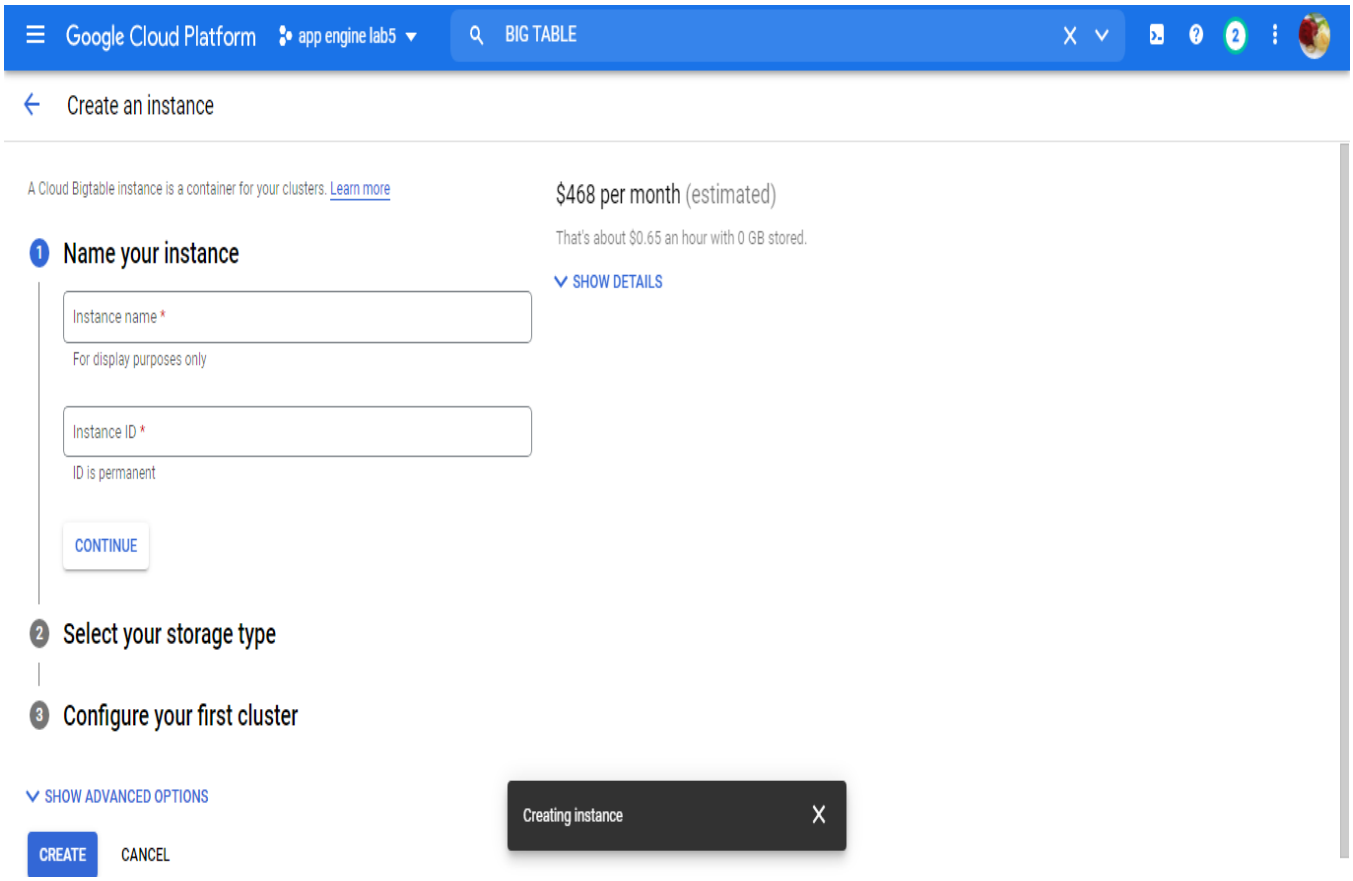

STEP 4: Create an instance give a name of the instance and ID select the storage type as SSD

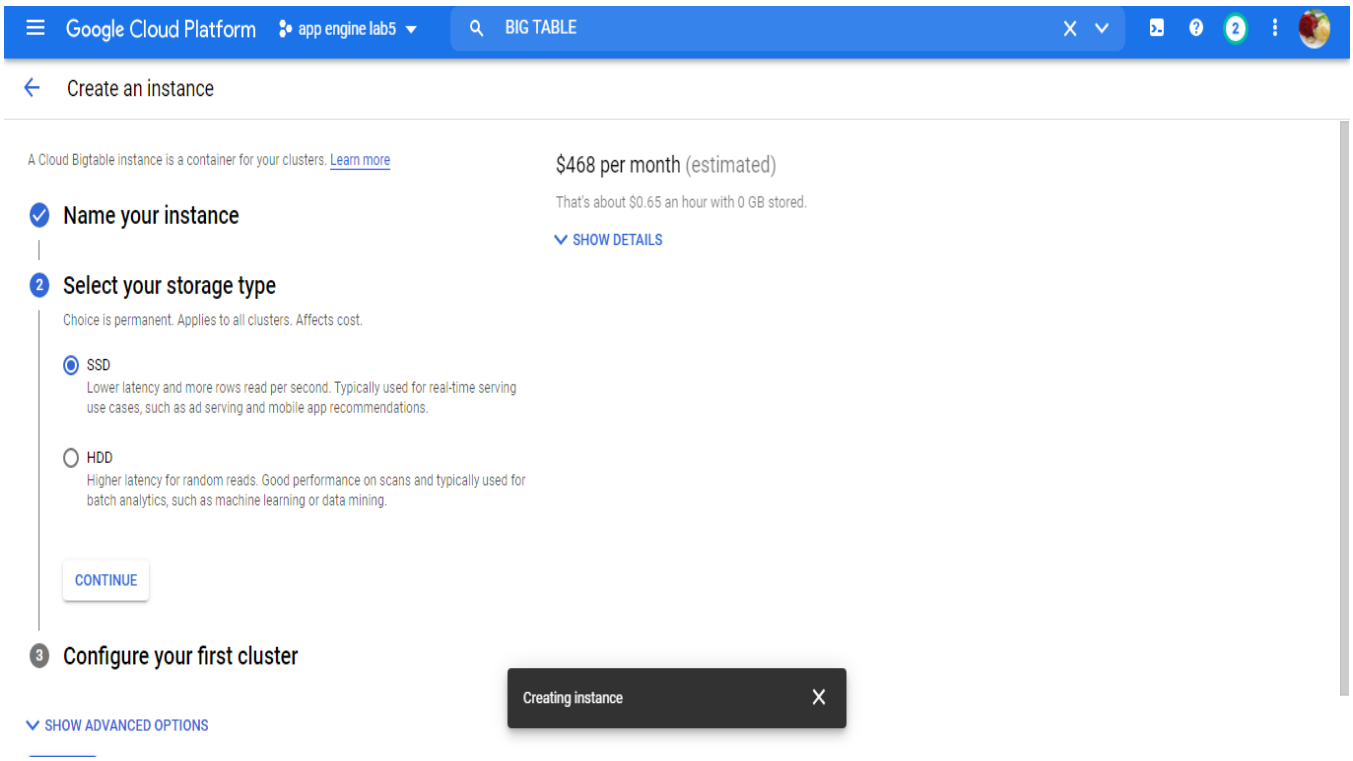

STEP 5: Give the cluster name and cluster id and select the location and nodes

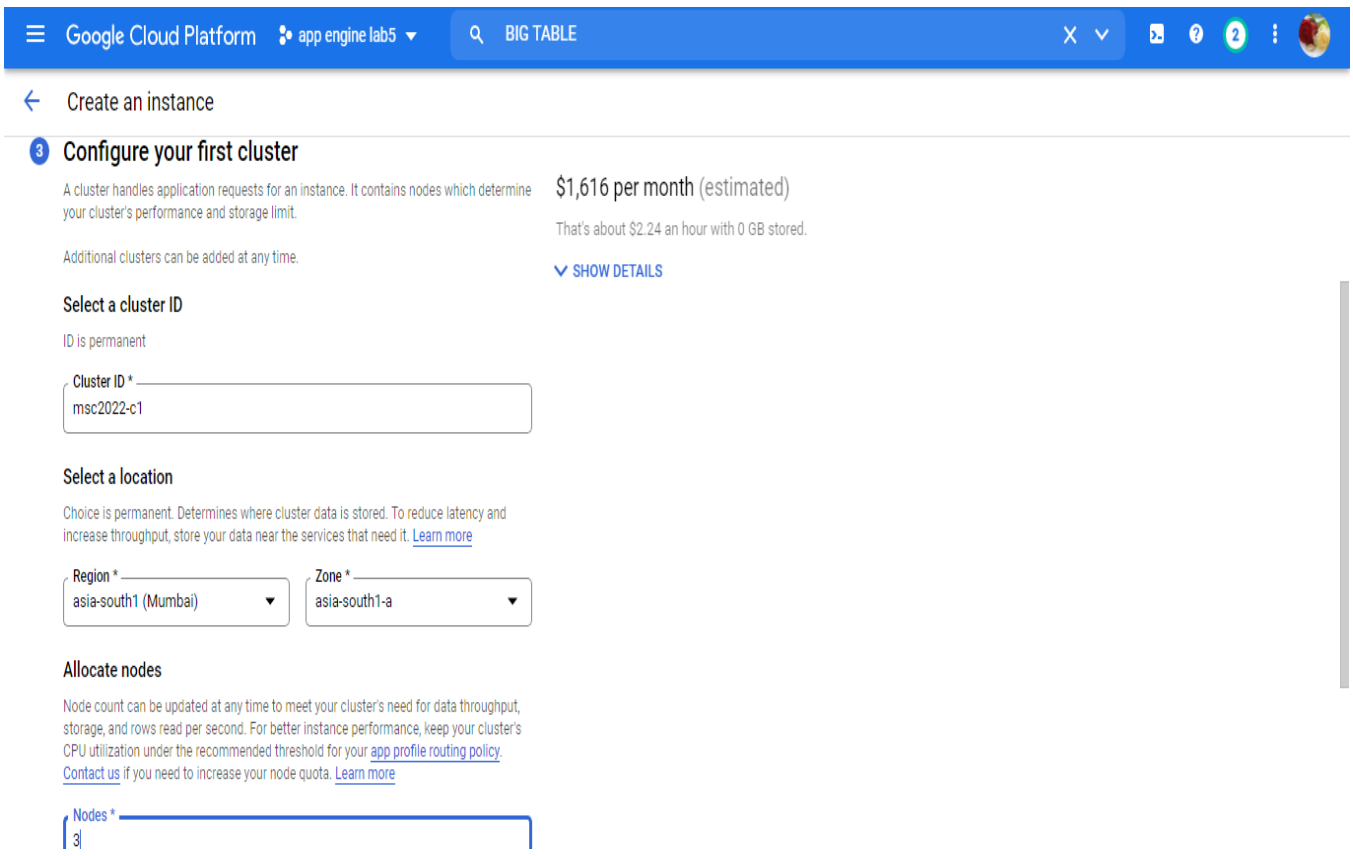

STEP 6: Configure your first cluster

STEP 7: Stop the program

BIG TABLE
Create an instance
A Cloud Bigtable instance is a container for your clusters. Learn more
Name your instance
2 Select your storage type
Choice is permanent. Applies to all clusters. Affects cost.
SSD
Lower latency and more rows read per second. Typically used for real-time serving use cases, such as ad serving and mobile app recommendations.
HDD
Higher latency for random reads. Good performance on scans and typically used for batch analytics, such as machine learning or data mining.

BIG TABLE
Create an instance
3 Configure your first cluster
A cluster handles application requests for an instance. It contains nodes which determine your cluster's performance and storage limit.
Additional clusters can be added at any time.
Select a cluster ID
ID is permanent
Cluster ID *
msc2022-c1
Select a location
Choice is permanent. Determines where cluster data is stored. To reduce latency and increase throughput, store your data near the services that need it. Learn more
Region *
asia-south1 (Mumbai)
Zone *
asia-south1-a
Allocate nodes
Node count can be updated at any time to meet your cluster's need for data throughput, storage, and rows read per second. For better instance performance, keep your cluster's CPU utilization under the recommended threshold for your app profile routing policy. Contact us if you need to increase your node quota. Learn more
Nodes *
3
$1,616 per month (estimated)
That's about $2.24 an hour with 0 GB stored.

HIDE INFO PANEL
Cloud Bigtable is a fully managed, wide-column NoSQL database that offers low latency and replication for high availability. You can provision Cloud Bigtable instances for your workload, then use one of the Cloud Bigtable client libraries to develop applications.

Use this panel to manage access for specific instances
Important: At the project level, all principals must also have the Cloud Bigtable Viewer role (recommended), or a higher-access role such as Reader, User, or Administrator. Otherwise, they will not have access to Cloud Bigtable through the Cloud Platform Console. Go to the IAM & Admin page to assign project-level roles.
Please select at least one resource.
